

# LASIK

As one of the leading LASIK and refractive surgeons in the area, Dr. Harmon Stein has successfully performed over 20,000 laser vision procedures to treat nearsightedness, farsightedness and astigmatism, allowing patients to live without the hassle of glasses and contact lenses! At Total Eye Care, we carefully examine each patient during a complimentary consultation to determine if you are a candidate for laser vision correction. Dr. Stein will review your best option for refractive surgery, including the benefits and differences between Custom WAVEfront LASIK and Bladeless LASIK technology. He also specializes in PRK and the Visian ICL procedures. We offer affordable 0% financing as well as free enhancements for life.

## How does it work?

**Step 1:** The laser is applied at predefined depth on cornea forming a canal, a cleavage plane and a side cut to lift the flap.

**Step 2:** Flap of precise thickness and shape is formed and now eye is ready for the reshaping to be done with the laser.

**Step 3:** The cornea is reshaped permanently to correct the patient's refractive error.

**Step 4:** After correcting the cornea the flap is gently placed back.

**1 in 4**  
children have vision problems.

# 3 MILLION

Americans have glaucoma but only half of those know they have it. Glaucoma is the 2<sup>nd</sup> leading cause of blindness in the world.

# 80%

of vision problems worldwide are avoidable or curable.

Schedule a comprehensive dilated eye exam once a year. A dilated eye exam is the only way to detect many common eye diseases such as glaucoma, diabetic eye disease and age-related macular degeneration in their early stages.
